have a longer
lifespan*

COST-CUTTING

=

MORE PROFIT

An important advantage of high-end release agents: they enable you to save costs and keep a clean working environment. The high quality release agents can prevent your products to become dirty or damaged. A smaller dosage is sufficient, which is a considerable cost saving.

Easy Go® Keg Air-Mix

Easy Go® Keg Air-Mix is a complete spraying system for an easy apply of release agents resulting in beautiful end products, flawless and quick release and the application of dividing oils. The constant spray pattern ensures that the product is evenly distributed on the surface, while the environment stays clean. Easy Go® Keg Air-Mix is a closed system and reduces fogging in the bakery, so this brings more convenience and hygiene in the bakery..

Aerosols

Aerosol is a solution for people who work with small scale production runs. We have two types available with release agents and one for lubrication. Aerosols will make you more flexible while preparing your bread and pastry creations. Clean, quick and problem-free release. Sonneveld's aerosols make this possible for bakers and confectioners. Our practical spray cans makes it very easy to apply. They ensure that time after time, your bread and confectionery creations are released from their tins and moulds without suffering damage.

Cooking spray

Goldwax & Pancoating can also be used in a professional kitchen as a non-stick cooking spray for the preparation of meals like pancakes, fried eggs. The spray can be applied on frying pan, grill or waffle-iron.

Vegetable oils

Sonneveld only uses vegetable oils in the entire product line. These oils, in contrast to mineral oils, are no risk to public health.

ORGANIC

The use of an organic release agent (Bio Release) or dividing oil (Bio Division) is mandatory if the bakery works according to the quality mark for organic products. This means that consumers can rely on the fact that an organically manufactured product is really organic.

Release agents standard assortment

Product name	Release power*	Bread products	Confectionery and pastry products	Against carbonisation**	Shelf life baked products***	Suitable for tin	Suitable for tray	For tin or tray with coating (teflon, silicon)

Division 40	2	Yes	No	•	•	
Division 100	2	Yes	No		•	
Bio Division 75	2	Yes	No	•	•	•
Division Spray	2	Yes	No	•	•	•

Choose wisely

There are various ways in which vegetable high-quality release agents can be of benefit to you. It is important to make a considered choice concerning the recipe, baking process, baking tray or tin (type, material, coating, age), the desired shelf life of the end product and the packaging.

Only then you can be sure that the release agent of your choice is the best for your specific situation. The method used to apply the release agent is important for the selection of the release agent, because spraying requires a different composition compared to dripping or brushing.
